**USB DEVICE MAKES WEIGH IN MOTION SOFTWARE ACCESSABLE FROM  
YOUR LAPTOP**

SASKATOON: There is no longer the need for full sized desktops in weighing applications. Massload Technologies has developed innovative software allowing its users to connect to any load cell or load cells, plug into the USB port of a computer and instantly have a high resolution, low cost, digital scale at their fingertips!

Massload Technologies Scale Scope software uses a regular digital indicator type display, having all of the functions of standard weight displays. It is used for high speed data capture and display from any strain gauge sensor, including load cells and pressure transducers. For users with more than one scale this software is for you! It is capable of displaying output from up to eight scales on a scrolling graph. That information can then be exported to an MS Excel or text file for user ease ability.

With the option to have software custom designed to your needs how can you go wrong! Call Massload Technologies for more information at 1-800-667-3825 and we will design a system that is right for you. It is just that simple.
